Astronomie populaire pdf

French astronomer Camille Flammarion (1842-1925) firmly believed that science should not be the preserve of elites. His passion for the discoveries of his time is palpable throughout this classic introduction to astronomy, which stands as a landmark in the history of popular science writing. It features 360 illustrations, including highly detailed maps of the Moon and Mars, the latter being of special interest for Flammarion as he compared and contrasted it with the Earth. Originally published in 1880, the work won the approval of the Académie Française and the Minister of Public Instruction. This reissue is of the version that appeared in 1881 after 50,000 copies had already reached an enthusiastic readership. Its translation into English as Popular Astronomy (1894) and another accessible work by Flammarion, Le Monde avant la création de l'homme (1886), are also reissued in this series. Use data cannot currently be displayed. © 1996-2015, Amazon.com, Inc. or its subsidiaries. Article description: C Marpon and E Flammarion, 1884. Rigid ceiling. Condition: Pretty good. In-4, 339pp. Cover publisher with cardboard, brown canvas, somegratin dishes and the wrinkled canvas at the edge. Back with 5 nerves with golden containers. Seller No. R260124260 Learn more about this seller | Contact the seller 20. Item description: Paris. C. Marpon and E. Flammarion, 1884. A strong flight in In-4 format (278 x 192 mm) of 4 ff. n.fol. 1 chromolithographed frontispic n.fol. and 839 p. Cover for the edition of full board cherry, quadruple golden net that frames the dishes, the first of which is decorated with a significant figurative figure on ebony background, with golden stroke, smooth back with large golden figurative flowers, golden frame boxes, golden double nets, golden titles, golden discs. (Berger and Magnier). Copy with his pretty publisher cardboard signed at the back of [Charles] Magnier. Many figures in text and full-page boards in black and colours. With this book, Camille Flammarion presented himself as a worthy successor to Francois Arago and the immortal geniuses of Copernicus, Galilee, Kepler and Newton, to whom his popular astronomy is dedicated. His scientific discoveries in the 21st century have still put him first among French popularizers by making the problems of astronomy, the Earth's atmosphere and climate accessible to the general public. This book is written for all those who like to recognize the things around them, and who would be happy to acquire an elementary and exact idea of the universe without fatigue. Isn't it nice to in contemplating the great shows of nature? Doesn't it make sense to at least know what we're going to do, what place do we occupy in infinity, what is this sun whose charitable rays sustain earthly life, what is this who seeks us, what are the many stars that spread their light into the quiet space in the dark night? These the universe without which we would vegetate like plants, in the ignorance and indifference of the causes, the effects of which we constantly suffer, we can acquire them not only without effort, but also with ever-increasing pleasure. Slightly cut out angles and cuts. Loss of angular coloration, which affects each of the dishes. Clear freckles in the text. Clear Cerne, which affects the booklets of some sheets (more on the last, but without consequences for reading). Moreover, good conditions.
